

Anti-Sulfo LacNAc Antibodies

Sulfated carbohydrate chains are commonly found in glycosaminoglycans, and their diverse sulfation patterns are responsible for a wide variety of biological interactions. For example, 6-sulfo LacNAc (slan) and sulphate-modified sialyl-Lewis X have been reported to respectively act as P-selectin and L-selectin ligands in humans and mice during cell adhesion mediated by lymphocyte homing. Here, we introduce antibody products useful for detecting these carbohydrate ligands.

Anti-6-sulfo LacNAc Monoclonal Antibody (AG105) 0.1mg/vial [A3251]

Isotype: Mouse IgM

Specificity: 6-Sulfo LacNAc, 6-Sulfo Lewis X

References

- 1) Expression of sialyl 6-sulfo Lewis X is inversely correlated with conventional sialyl Lewis X expression in human colorectal cancer

Anti-6,6'-disulfo LacNAc Monoclonal Antibody (L4L4-8)

Isotype: Mouse IgM

Specificity: 6,6'-Disulfo LacNAc

0.1mg/vial [A3252]

Reference
